Fast, Effective Impact Cleaning

Alfa Laval TJ MultiJet 40 Rotary Jet Head

Application
The Toftejorg MultiJet 40 rotary jet head provides 3D indexed impact cleaning over a defined time period. It is ideal for applications where cost-effective impact cleaning with rotary jet heads is needed, but where compliance with hygienic design standards is not a requirement. The device is suitable for process, storage and transportation tanks between 50 and 500 m³. It is designed to work under conditions where fibres, finer particles, etc. in the cleaning media may be re-circulated through the machine.

Working principle
The flow of the cleaning fluid makes the nozzles perform a geared rotation around the vertical and horizontal axis. In the first cycle, the nozzles lay out a coarse pattern on the tank surface. The following cycles make the pattern gradually more dense, until a full pattern is reached after 8 cycles.

TECHNICAL DATA
Lubricant: ...................... Self-lubricating with the cleaning fluid
Max. throw length: ............. 8 - 17 m
Impact throw length: ............. 4 - 10 m
Pressure
Working pressure: .............. 3 - 12 bar
Recommended pressure: .......... 5 - 6.5 bar

Cleaning Pattern
First cycle
Full pattern

The above drawings show the cleaning pattern achieved on a cylindrical horizontal vessel. The difference between the first cycle and the full pattern represents the number of additional cycles available to increase the density of the cleaning.

Certificates
2.1 material certificate and ATEX.

PHYSICAL DATA
Materials
316L (UNS S31603), PTFE, PEEK, ETFE, FPM, TFM
Surface finish: ...................... Exterior finish: glass blasted
Temperature
Max. working temperature: .......... 95°C
Max. ambient temperature: ............ 140°C
Weight: ............................. 6.1 kg
Connections
Standard female thread: .............. 1½” Rp (BSP) or 1½” NPT
Options
Electronic rotation sensor to verify 3D coverage.
Caution
Do not use for gas evacuation or air dispersion.
Standard Design
The choice of nozzle diameters can optimise jet impact length and flow rate at the desired pressure. As standard documentation, the Toftejorg MultiJet 40 can be supplied with a “Declaration of Conformity” for material specifications.

TRAX simulation tool
TRAX is a unique software that simulates how the Toftejorg MultiJet 40 performs in a specific tank or vessel. The simulation gives information on wetting intensity, pattern mesh width and cleaning jet velocity. This information is used to determine the best location of the tank cleaning machine and the correct combination of flow, time and pressure to implement.

A TRAX demo containing different cleaning simulations covering a variety of applications can be used as reference and documentation for tank cleaning applications. A TRAX simulation is free and available upon request.
